

Ryzom - Bug # 954

Status:	New	Priority:	Normal
Author:	sfb	Category:	Client: General
Created:	06/02/2010	Assignee:	
Updated:	06/05/2010	Due date:	
Subject:	Make all client sheets code a common library.		
Description			
<p>At least one tool (sheets_packer) uses the client_sheets library directly but also requires the following source files directly from the client:</p> <ul style="list-style-type: none">- code/ryzom/client/src/continent_manager_build.cpp- code/ryzom/client/src/continent_manager_build.h- code/ryzom/client/src/sheet_manager.cpp- code/ryzom/client/src/sheet_manager.h <p>Move these four files to client_sheets. There is the possibility that more tools and applications will arise that load the client sheets directly and thus may need these loaders as well.</p> <p>Optional:</p> <ul style="list-style-type: none">- Move client_sheets entirely to code/ryzom/common/src.- Move client_sheets code into a unique namespace.

packed_sheet are just a file caching system. Instead of loading thousand of xml files (sheets), it (client or services) generates a binary with only information it needs. if the packed_sheets doesn't exist or is not up to date, it create/update the cache.

we don't need a tool that generate these files, it's the client or service system to do it.
